Draw an arc on the mounting board at a radius of 210.6 mm from the turntable spindle. Anywhere along this line the arm can be mounted. Approximate a 30° angle from the turntable front, as shown at position 'A'. Using this centre, mark the position of the 3 securing screws 15/16" from the centre. Ensure that the vertical height adjusting screw will be accessible when the arm is mounted. Drill 3 holes, 3/16" in diameter, 120° apart as shown.

Lastly drill the main central hole a minimum 3/4" in diameter. It is recommended that the hole be made slightly larger.
